Extraction capacity 3800 - 5500 m³/h · PE-M:	27 760
Extraction capacity 3800 - 5500 m³/h · ePTFE:	27 761

The LaserFil filter system of the Automation-Line is supplied ready to use and can be set up and put into operation in just a few seconds thanks to its compact design. The particularly large filter surface is optimally adapted to the laser cutting process and enables an effective extraction capacity. The unit is connected via various duct connection options directly to a laser cabin that covers the entire working area. This is essential to prevent the cutting fume from spreading into the production hall.
