

ArcFil Pro

Extraction capacity 1250 - 2160 m³/h:	35 20
Extraction capacity 2.000 - 2.880 m³/h:	35 30
Extraction capacity 2.750 - 3.960 m³/h:	35 40
Extraction capacity 3.500 - 5.040 m³/h:	35 50
Extraction capacity 4.500 - 6.480 m³/h:	35 65
Extraction capacity 5250 - 7560 m³/h:	35 75
Extraction capacity 6.000 - 8.640 m³/h:	35 85

The ArcFil Pro filter system of the Automation-Line can be set up and put into operation in just a few seconds thanks to its compact design. Thanks to the high and effective extraction capacity, it is particularly suitable for robot welding applications of various processes, such as laser welding. Thanks to the W3 certification (DIN EN ISO 21904) of the ArcFil Pro, it is possible to feed the filtered air directly back into the production hall, which makes it particularly energy efficient. The unit is connected directly to an extraction hood or cabin that covers the entire working area of the robot. This is essential to prevent the cutting fume from spreading into the production hall.
